

SATRON VV Pressure Transmitter

SATRON VV pressure transmitter belongs to V-transmitter family. The series V transmitters have both analog and smart properties. SATRON VV is used for 0-1.4 kPa...0-0.5 MPa ranges. It is a 2-wire transmitter with HART® standard communication.

SATRON VV pressure transmitter is suitable for liquid level measurements in ground, rock and ships' tanks, and in open channels.

SATRON VV pressure transmitter can be used in corrosive conditions and to measure contaminating liquids. Possible foam on the surface of the measured liquid does not disturb the measurement. SATRON VV does not require compressed air supply.

The transmitter's sensor is piezoresistive. The rangeability is 50:1 for type VV5.

Measuring range and span

See Selection Chart.

Zero and Span adjustment

Zero elevation: Calibrated span is freely selectable on the specified range depending from the desired option. This can be made by using external control shafts (analog option), keyboard (display option) or HART®275/375 communicator.

Damping

Time constant is continuously adjustable 0.01 to 60 s.

Temperature limits

Process: -10 to +125 °C
Ambient: -30 to +80 °C
Shipping and storage: -40 to +80 °C.
Operating temperature of display: 0 to +50°C (does not affect operation of the transmitter)

Equipment cabinet is recommended for extremely demanding conditions.

Pressure limits

Min. and max. process pressure: See the appended tables.

Output 2-wire (2W), 4-20 mA, user selectable for linear, square root, inverted signal or the transfer function (16 points) specified by the user

Supply voltage and permissible load

See the load capacity diagram;
4-20 mA output: 12-35 VDC.

Humidity limits 0-100 % RH; freezing of condensed water is not allowed in reference pressure channels.

PERFORMANCE SPECIFICATIONS

Tested in accordance with IEC 60770: Reference conditions, specified span, no range elevation, AISI316L diaphragm, silicone oil fill.

Accuracy

- ±0.05 % of calibrated span (span 1:1-5:1 /max.range).
On the measuring ranges 5:1- 50:1:

$$\pm[0.01+0.012 \times \left(\frac{\text{max. span}}{\text{calibrated span}}\right)] \% \text{ of calibrated span}$$

(incl. nonlinearity, hysteresis and repeatability)

Long-term stability

±0.1 % of max. span per 12 months

Temperature effect on compensated temperature ranges

Zero and span shift: ±0.15 % of max. span

Mounting position effect

Zero error <0.32 kPa, which can be calibrated out.

Vibration effect (IEC 68-2-6: FC):

±0.1 % of measuring range/
2 g/10 to 2000 Hz
4 g/10 to 100 Hz

Power supply effect

<±0.01 % of calibrated span per volt.

Insulation test voltage

500 V rms 50 Hz.
